Professor Kuntz

Self Analysis-Project 0

5.1) The hardest part of this assignment for me was question 3 ShopSmart. This was my first time using Python and I am not as used to writing in weakly typed languages and therefore had some bugs to work through.

5.2) Question 1, Addition, was the easiest part of this assignment for me because it was 1 line of code adding 2 integers together.

5.3) Problems 2 and 3 helped me understand the material further because they forced me to use objects I had not yet used in Python such as dictionaries.

5.4) No, I thought all problems were a proper length and fulfilled their intended purpose of getting us exposed to Python.

5.5) I enjoyed how short it was!
